DEVELOPER AMENDMENT LIST

Individual Seat Booking and Table Booking

Please apply the following changes in order.

1. Form heading and introduction

Current / location	Change to
Event heading	Keep the configured event title.
Introductory paragraph	Replace with: “Please review the event details and select your preferred booking option below.”

2. Booking Type cards

Element	Replace with
Individual Seats card title	Individual Seat Booking
Seat availability badge	“{count} seats available” (dynamic count)
Seat card description	“Book individual seats. Seats are automatically allocated based on availability.”
Table card title	Table Booking
Table availability badge	“{count} tables available” (dynamic count)
Table card description	“Reserve an entire table. Choose from the table options available for this event.”
Remove	“Table(s) in Pool”, “dedicated Table Pool”, and other internal wording.

3. Individual seat booking fields

Current label / text	Change to / action
Ticket Price	Price per Ticket
Seat Allocation Policy	Seat Allocation
Allocation notice	“Seats are automatically allocated consecutively, based on availability.”
Seats to be assigned	Seats to be allocated (until seats have actually been assigned)
Admin-blocked count	Remove from customer view; retain internal status in admin.
Allocation confirmation note	“Your consecutive seat numbers will be sent to your registered email address and mobile number once your payment is successful.”

4. Table booking fields and selection

Current label / text	Change to / action
Table Tier / Type	Table Type
Dropdown placeholder	Select a table type
Number of Tables	Keep; prevent quantity exceeding availability for the selected type.
Table Pool Policy paragraph	“Only tables available for table booking can be selected. Tables reserved for individual seat bookings or marked unavailable cannot be booked.”
Choose Table(s)	Select Table(s)
Initial selection prompt	“Select a table type to view the available tables.”
Legend: Available (Click to select)	Available (select to book)
Legend: Reserved (Admin blocked)	Reserved
Legend: Booked (Already taken)	Booked
Legend: Seat Pool (Individual seats only)	Remove from customer-facing legend, or replace with “Individual Seat Booking Area” if customers need this distinction.
Sold-out table types	Show “Sold out” and disable selection.
Testing Tier option	Remove from public dropdown if it is only for development/testing.
Table selection tiles (after choosing a type)	Keep the individual table cards (e.g. P01, P02) showing table ID, seating capacity and status. Use clear customer-facing status labels: “Available”, “Booked”, “Reserved” and “Unavailable” where relevant. Remove internal labels such as “Admin blocked” and “Seat Pool” from the customer legend/cards, or explain them in customer-friendly wording. Make available tables selectable and visibly highlight selected tables. Disable booked/reserved/unavailable tables. Show the number of seats per table from the selected table type configuration.

Keep table capacity and price visible in the dropdown where useful, but read the values from the event configuration. Clear incompatible table selections and recalculate the total if the visitor changes table type.

Additional table-selection display amendment: When a table type is selected, show the available table cards beneath “Select Table(s)”. Each card should show the table ID (e.g. P02), seat capacity and status. Selected tables must have a clear selected state; unavailable tables must not be selectable. Use customer-facing status labels and remove “Reserved (Admin blocked)” and “Seat Pool (Individual seats only)” from the public legend.

5. Booking contact and special requests

Current label / placeholder	Change to
Attendee Information	Booking Contact Details (if only one primary contact is collected)
Name on Tickets / Reservation	Full Name
Full Name placeholder	Enter your full name
Mobile placeholder: 07X XXXXXXX	Enter your mobile number
Booking Notes / Special Requests (Optional)	Special Requests (Optional)
Special requests placeholder	Enter any special requests here

Keep Email Address with placeholder “name@example.com”. Remove event-specific examples from the shared special-requests placeholder.

6. Booking summary

Current label / display	Change to / action
Seats / Tables	Number of Seats for individual bookings; Number of Tables for table bookings.
Assigned / Selected	Use “Tables Selected” for table selection; “Seats to be allocated” before seat assignment; “Assigned Seat(s)” only after assignment.
TOTAL AMOUNT / Total Amount	Total Amount Payable
Table booking starts at 0 Tables / LKR 0.00	Keep the summary accurate, but disable payment until a valid table type and required table selection/quantity are completed.
Summary totals	Update automatically when quantity, table type or selected tables change.

7. Pricing

Booking type	Change / requirement
Individual seat booking	Show “Price per Ticket”; total = number of seats × configured ticket price, plus any configured charges.
Table booking	Show “Price per Table”; total = number of tables × configured price for the selected table type, plus any configured charges.
Prices shown in screenshots	Treat LKR 6,500, LKR 15,000, LKR 65,000, LKR 90,000 and LKR 120,000 as current-event values, not fixed common text.
Pricing changes	Recalculate when the visitor changes quantity/type. Validate the final amount server-side.

8. Terms and payment

Current / location	Change to / action
Terms checkbox	“I have read and agree to the terms and conditions.” Make “terms and conditions” a clickable link.
Payment button	Keep “Proceed to Payment”.
CBC PayCenter note	Use “Secure payments are processed through the designated payment gateway.” Show a provider name only if configured and accurate.
Payment success message	“Your payment was successful. Your booking is confirmed.” Show only after verified payment and booking finalisation.
Payment pending message	“Your payment is being processed. Please check your booking status before trying again.”
Payment failure message	“Your payment could not be completed. Please try again or use another payment method.”

9. Right-hand event panel

Current label	Change to

Base Ticket	Price per Ticket (for individual tickets)
Seat Pool (Available)	Individual Seats Available
Table Pool (Available)	Tables Available
Date / Time / Venue / event title	Keep labels; load values for the selected event.

10. Seating plan and availability consistency

- Ensure the seating plan is for the selected event and remains readable when opened full-size and on mobile.
- Ensure the visual map and table selector use the same table IDs and availability statuses.
- Make the displayed available counts agree across the booking cards, event panel, table dropdown, seating plan and booking summary.
- Check the figures (128 seats available, 4 tables available, plus booked/reserved counts) and confirm that “available” means genuinely bookable inventory, not total capacity.
- Prevent reserved, booked, blocked or sold-out seats/tables from being selected or confirmed.
- Recheck availability on submission and protect against two customers booking the same seat/table.
- Send confirmation only after verified successful payment. Include booking reference, event details, booking type, quantity, amount paid and assigned seat/table details where applicable.
- Test the full flow for both individual seats and tables on desktop and mobile.

11. Final quick checks

- ☐ No event-specific wording is hardcoded into shared labels, placeholders or helper messages.
- ☐ Individual seat and table pricing calculate separately and correctly.
- ☐ Sold-out table types and unavailable inventory cannot be selected.
- ☐ Payment cannot proceed with missing required details or unchecked terms.
- ☐ Pending/failed payment does not show a confirmed booking.
- ☐ The form remains usable on mobile without horizontal overflow.
